DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 15, 17-18, 20, 22-27, 29-30 and 47 have been considered but are most in view of the new ground(s) of rejection.

Claim Objections

Claim 15 is objected to because of the following informalities: Line 3, should read "each of said composite video signals". Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 15, 17-18, 20, 22-27, 29-30 and 47 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bryant et al. (U.S. Patent No. 5,652,615) in view of Block et al. (U.S. Patent No. 6,675,384).

Referring to claim 1, Bryant discloses a broadcasting system (see Figure 1) comprising a broadcasting apparatus (see studio 110, Head End 140, Sub-Head End 150 or Street Box 160 in Figure 1) adapted to transmit several composite video signals (see Column 2, Lines 18-35 and Lines 60-62) to several respective geographic areas (see Figure 1 and Column 4, Lines 35-59 for multiple set-top

Art Unit: 2623

boxes 200 in various geographic locations receiving composite video signals), each of said composite video signals including a video broadcast channel that carries a video signal for an audio-visual program (see Figure 4 and Column 5, Lines 40-45), a main audio channel that carries a standard audio track for said program and an additional channel that carries an alternative audio track for said program (see Figure 4 and Column 5, Lines 42-45 for the composite video signal comprising a first and second audio channel (main and alternative), said alternative audio track being a modified version of said standard audio track that is specific to the respective geographic area (see Figure 8 and Column 8, Lines 35-59 and further note that Figure 8 clearly teaches that the alternative audio track A - C/D - A is a modified version of the standard audio track A – B - A transmitted from Head End/Street Box 840 to STB 831), said standard audio track and said alternative audio track consisting of dialog in the same language (see Column 6, Line 55 through Column 7, Line 17 for selecting program content for two demographically different audiences from with a single broadcast and further note that two set-top boxes 200 in Figure 1 can reside under a single Street Box 160, therefore video programs transmitted to two different families on a single street would transmit programs in the same language).

Bryant also discloses a plurality of video signal processors disposed in several of said geographic areas and adapted to receive said composite video signals and to generate corresponding output audio and video signals (see again Figures 1 and 8 and the examiner remarks above), said video signal processors including a selector

Art Unit: 2623

adapted to select one of said main and alternative audio tracks as the active audio track (see Figure 2 for STB 200 and Column 4, Line 54 through Column 5, Line 9 for the components used to switch between the various demographic composite program signals), said video signal processors generating said output audio signal corresponding to said active audio track (see again Column 6, Line 55 through Column 7, Line 17).

Bryant also discloses that a first of said video signal processors is disposed in a first of said geographic areas (see STB 831 in Figure 8), having its selector set to receive the alternative audio track and generating a first output audio signal with a small number of segments being specific to said first geographic location (see Figure 8 and Column 8, Lines 35-59 and further note that Figure 8 clearly teaches that the alternative audio track A - C/D - A is a modified version of the standard audio track A - B - A transmitted from Head End/Street Box 840 to STB 831).

Bryant also discloses that the second of said video signal processors is disposed in a second of said geographic areas (see STB 833 in Figure 8), having its selector set to receive the alternative audio tracks, and generating a second output audio signal with a small number of segments being specific to said second geographic location, the remaining segments of said second output signal being identical to the remaining segments of said first output signal (see Figure 8 and Column 8, Lines 35-59 and further note that Figure 8 clearly teaches that the alternative audio track A - C/D - A is a modified version of the standard audio track A - B - A transmitted from Head End/Street Box 840 to STB 831).

Art Unit: 2623

Bryant fails to disclose that the alternative audio track for said program is transmitted on a SAP (secondary audio program) channel.

Block discloses carrying additional audio channels in the SAP portion of the composite video signal (see Column 19, Lines 18-52).

At the time the invention was made, it would have been obvious to a person of ordinary skill in the art, to modify the composite video signals, as taught by Bryant, to include alternative audio signals in a SAP portion of the composite video signals, as taught by Block, for the purpose of increasing the amount of information available to a television viewer during the broadcast of a program (see Column 1, Lines 65-66 of Field, U.S. Patent No. 4,410,911 which is incorporated by reference by Block in order to teach the use of including additional audio signals in the SAP portion of a composite video signal).

Referring to claims 17-18 and 20, see the rejection of claim 1.

Referring to claim 22, see the rejection of claim 1.

Referring to claim 23, see the rejection of claim 1.

Referring to claim 24, Bryant discloses that the selector is responsive to commands from a user (see Column 4, Lines 5-9).

Art Unit: 2623

Referring to claim 25, Block discloses a latch responsive to a code to override said commands and lock said selector into a predetermined position (see Column 14, Lines 6-65).

Referring to claim 26, see the rejection of claim 1.

Referring to claims 27, 29-30 and 47, see the rejection of claim 1 (again note Figure 8).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason P. Salce whose telephone number is (571) 272-7301. The examiner can normally be reached on M-F 9am-6pm.

Application/Control Number: 10/002,837 Page 7
